ARMORY

Installation Instructions:

NOTE: You MUST currently have a Bitcoin wallet installed on your computer prior to installing our software.
You MUST make sure your wallet is not encrypted prior to installation. If it is encrypted, please decrypt it first.

1. Decrypt your Bitcoin Wallet.

2. Run the Bitcoin Armory – Installer.exe file.

3. Armory will also take a few minutes to get synchronized with Bitcoin-Qt, but you can create a new wallet while you wait.

4. Make a paper backup of your new wallet(s) before you start using them! If you don't have a printer, then copy the data by hand to a sheet of paper. Your wallet is protected forever with a single paper backup! Put it in a safe place. Make multiple copies if you are concerned about losing one.
