

# File Activity Timeline

## Documentation

### Build Index

To build a map of a location click “Select Location”, and select the folder or drive.

If you have an image, click “Open Image Mounting Panel” to mount the image. You will have had to install the mounting driver previously.

You can also click one of the recently accessed maps.

Maximum Search Results: 1000 ☒ File Previews

As required, there are a large number of options when querying. Simply leave an item as it is to ignore it.

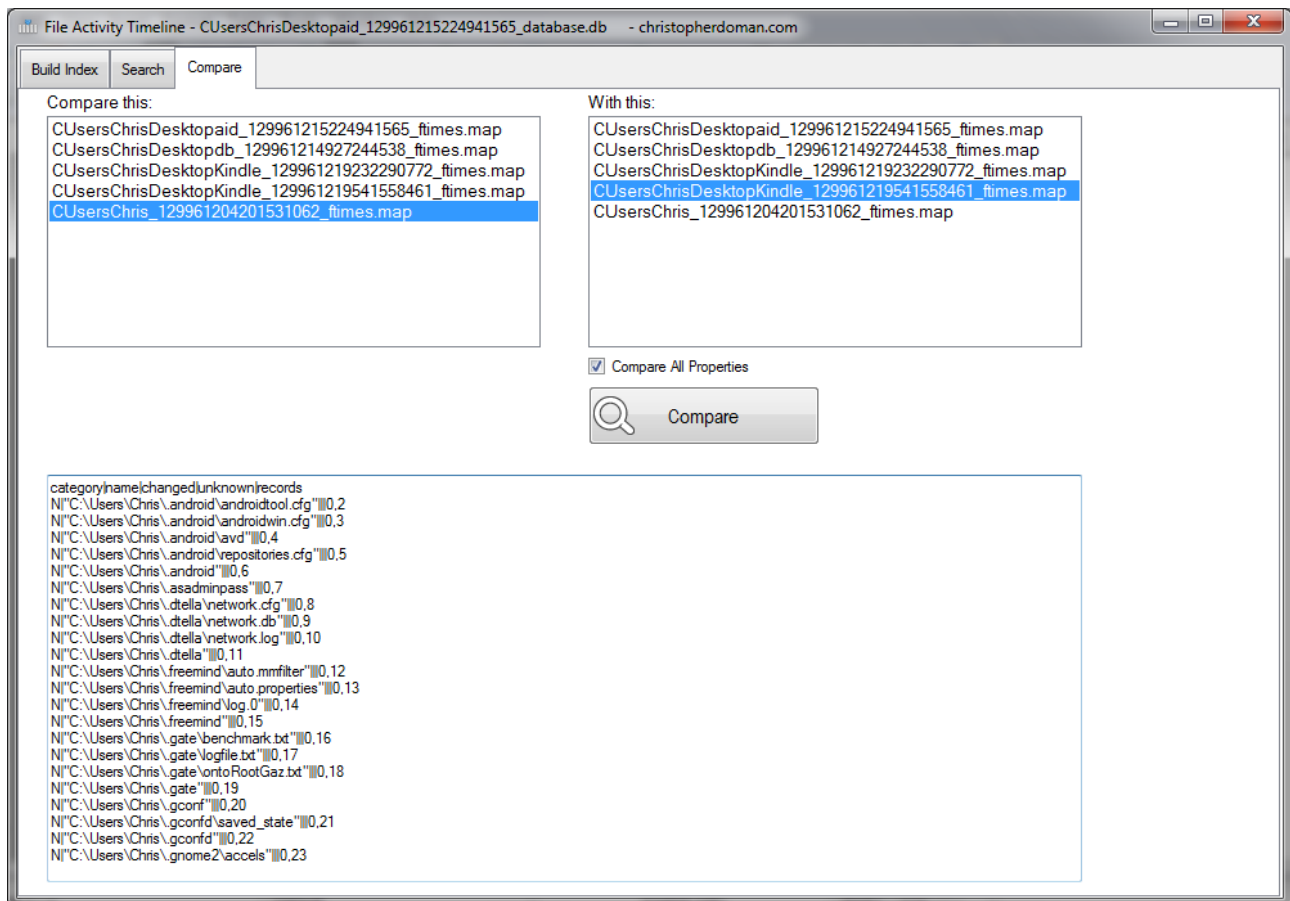

The parameters use the terminology that ftimes uses, for more information on what these terms mean please read the ftimes help page at

<http://ftimes.sourceforge.net/FTimes/Man+Pages/ftimes.shtml>

For example, to search for any word documents, enter “.doc” in the “Full Filename Contains” textbox then click search.

To search for all files in [C:\Users](#), enter “[C:\Users](#)” in the “Full Filename Contains” box.

## Compare

You can also compare two snapshots. Simply select them both and click “Compare”. The information provided is the same as running the ftimes compare command.
