

What's new in G-Ear

Editable playlists

You can now create, rename, delete playlists, and add songs to playlist (via right click context menu), remove, or rearrange them, *even more than one song at once if you wish.*

Improved look&feel

... and by default the volume slider isn't visible anymore. If you need it anyway, you can enable it in Settings!

Shortcuts

You can set up custom keys for thumbs up/down, or playback controls.

Double click playlist or album starts playback

And after you start the app, clicking play just starts playing a random song when in Shuffle mode.

Another great app from G-Ear developer team:

NewsBar RSS reader

Be The First To Know!

Supercharge your desktop with the top-seller NewsBar RSS Reader App, the fastest RSS Reader in the world.

You can open this info window from G-Ear Help menu.
