Read First Mailit 6

Thanks for evaluating Mailit 6 – the ultimate email plug-in for FileMaker 10-15!

Installation Instructions

Be sure to read the license agreement enclosed with this package before you start using the plug-in since you agree to the terms of the trial license agreement as soon as you start using the software.

To install the correct plug-in version of Mailit 6, open the folder "Plug-In" and choose the plug-in file from the correct sub-folder (Windows or Mac OS) according to your operating system.

Close FileMaker before installing the plug-in.

Mailit is compatible with FileMaker 10-15 Pro/Advanced/Runtime

Windows:
Copy the plug-in file to your FileMaker *Extensions* folder, which is located in your FileMaker application folder.

Mac OS: Copy the extracted plug-in file to your FileMaker *Extensions* folder, which is located in your FileMaker application folder.

After installing the plug-in please read the Manual to get started with Mailit 6.

Server Installation Instructions

In order to run the plug-in under FileMaker Server SSS (Server Side Scripting), available since FileMaker Server 9, you should make sure the plug-in is installed in to the proper Server location:

FileMaker Server 10 - 15
Windows: \Program Files\FileMaker\FileMaker Server\Database Server\Extensions\
Mac OS: /Library/FileMaker Server/Database Server/Extensions/

Please notice, that you should `"Enable the FileMaker Server to use plug-ins"`, before you can enable each particular plug-in.

In order to run the plug-in under FileMaker Server IWP (Instant Web Publishing), the plug-in should be installed to:

Windows:
\Program Files\FileMaker\FileMaker Server\Web Publishing\publishing-engine\wpc\Plugins

Mac OS:
/Library/FileMaker Server/Web Publishing/publishing-engine/wpc/Plugins

Please notice, that plug-in installed in to IWP "Plugins" folder will not get shown in the FileMaker Server Console.

FileMaker Server 64 bit edition, such as FileMaker Server 12 x64 and FileMaker Server 13-15 require 64 bit plug-in edition. Both Mac OS X plug-ins 32 bit (x86) and 64 bit (x64) are packaged into the same binary file (`"Mailit.fmplugin"`). Windows plug-ins are shipped separately: `"Mailit.fmx"` is a 32 bit (x86) version and `"Mailit.fmx64"` is a 64 bit (x64) version.

You can find more detailed information on the plug-in installation at:
