

## **MeshInstall READ ME (MeshInstall 1.0b9)**

Thank you for downloading MeshInstall! MeshInstall is an installer creation tool for content creators; because you shouldn't have to be a programmer to create an installer for content!

### **About This Version**

MeshInstall should run on any Windows 98SE+ or Windows 2000+ system. This version is missing several key features, including most of the advanced Validation features. You can, however, build credible installers using this Beta.

### **Installation**

MeshInstall is located inside a simple .zip file. Simply unzip the MeshInstall folder anywhere on your computer.

### **New in MeshInstall 1.0 b9**

Fixed: Numerous bugs.

Revised: Destination Designer and Folder Designer have changed positions. This reflects

Added: MeshInstall Express Destinations button. Its pretty now!

Added: Multiple Destinations. A powerful new feature! Now you can assign multiple destinations in Destination Designer, and each destination becomes a root folder in Folder Designer.

Removed: MacOS X version. There is a bug in our development tool (the vendor says this is because of a flaw in MacOS X which causes permissions to be mis-assigned) which prevents MeshInstall for MacOS X from defining permissions to installers.

However, MeshInstall for Windows builds installers for MacOS X!

### **New in MeshInstall 1.0 b8**

Fixed: Numerous bugs.

### **New in MeshInstall 1.0 b7**

Fixed: Appearance of destination path in compiled installers.

Revised: Destination Designer completely revised. Destination Designer now has a list of Destinations, allowing files to be installed into multiple locations. This feature will be revised further in the final release.

Added: Destination Templates in MeshInstall Express. This new feature is still somewhat fragile. Allows saving Destinations from Destination Designer and adding them to Express, for fast creation of new installers.

Added: MeshInstall Express Destination Templates. Now add your own Destinations!

Added: Generate Installer Options Dialog. Windows on MacOS X, MacOS X on Windows installer building! Build Windows and MacOS X installers at the same time!

Added: Generate Installer Options Dialog. Encryption Option. Select to apply 448-bit encryption to your installer!

Added: Generate Installer Options Dialog. One or Two File Installers. The default selection is generation of a single executable program installer. Select Separate Data File Option to generate an executable installer and separate xxx.dat file containing data.

Added: Generate Installer Option Dialog. Use Zip Compression. Apply Zip compression to your installer in order to reduce the final size of the installer.

### **New in MeshInstall 1.0b6**

Fixed: The MeshInstall.exe was not unloaded from memory after closing a Expert Window.

Added: Menu Help -> Register MeshInstall

Added: Menu Help -> Visit Support Forum

Added: Dialog "Register You Software" -> Button "Buy now"

Fixed: Express Mode -> Validation Tab - Set default choice to item "No Serial Number"

Fixed: Expert Mode Generate Installation - Check of files before Select destination folder

Added: Save serials.txt in install directory

Fix: Use of an external background picture. (It worked only in the first start)

Fix: Add check URL and phone present in company profile for show/hide "Validate from Web/Phone"

Fixed: Display of telephone numbers and business hours in built installers.

Fixed: Expiration date of beta extended.

### **Using MeshInstall**

Please refer to the online help for more information about MeshInstall. The online help currently describes very introductory creation of custom installers. We are currently testing a MacOS X version of MeshInstall. If you license MeshInstall, you will be able to use both the Windows and MacOS X versions if we are able to release the MacOS X version.

This beta will expire by February 27, 2005! A new beta version will be released prior to the expiration of MeshInstall 1.0b9 (or the final shipping release!).

NOTE: For MeshInstall to build installers, the mininstall.dat, default.mis, install.exe and meshinstall.exe components must be within the same directory.

### **Buying MeshInstall**

You can purchase MeshInstall during the beta period at a substantial discount. See the website for additional information.

### **Learning More about MeshInstall**

To get more involved with the beta of MeshInstall 1.0, please visit its support forum at: <http://meshbox.com/phpBB/viewforum.php?f=20>. In order to post to this forum, you will need to register.

You can download MeshInstall from the IconPeople website (<http://www.iconpeople.com>).
